Halspan® iD

a smart solution **for fabricators**

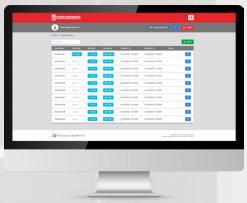

Halspan® iD

a smart solution for fabricators...

A purpose-built platform, **Halspan® iD helps Fabricators streamline fire door information via NFC tag pairing** — accessible via both the web and mobile app, and compliant with regional data law requirements. White-labelling options are also available for Fabricators, allowing products to be supplied unbranded and ready for your own company branding.

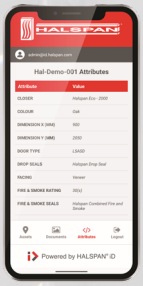

Information uploaded to the tag becomes publicly accessible to anyone who scans the NFC tag.

Web features

- Create, update, and organise fire doors and projects
- Import door records via spreadsheet upload
- Upload and store documents, certifications and images attributed to the individual asset

Mobile App features:

- Create a secure profile for access
- Search and select doors you have uploaded
- Pair NFC tags to specific doors
- Upload images and documents directly from your device
